NOBILIS®

The Best Technology for Water

TRADITION AND INNOVATION

The basic principle of the Acquerelli collection: cutting-edge technology. It is on this concept that the success of the 1980's series is recaptured and updated, with its dynamic character highlighted by the minimalism of its lines, perfectly balanced throughout all the variants of the collection. The technological advances of the Nobili Widd® 28 cartridge can be seen and experienced during daily use of the mixer, helping to save both water and energy.

THE ACQUERELLI COLLECTION IS BACK. IN GREAT FORM.

Technological innovation and creative insight. Hours of development and laboratory tests. Accurate adaptations, subtle improvements. Creation of a prototype in polyurethane resin. Silence and emotion. In the end, the objective is reached. Everyone is happy with the Acquerelli collection: the design staff, satisfied with having once again moved the axis of this innovation a little bit further over. The Centro Stile designers, unable to believe that they

could design such clean elegant lines. Acquerelli is the style resulting from the adoption the new Nobili Widd® 28 cartridge: the maximum technological expression of our brand-name in a diameter of only 28 millimetres. The avant-garde facilities at Suno, where the entire collection is manufactured, make an important contribution to ensuring that this innovative product comes to life. The Acquerelli collection is back. in great form.

Each Nobili mixer possesses all the positive attributes of its brand-name: sophisticated design and cutting-edge technology. The formal elegance of the Acquerelli collection doesn't accept compromise: the single jet shower heads of the bath sets and shower units, for example, have their own specific housing on the right of the mixer body. This new idea simplifies installation of the various parts and improves the architectural impact of the bathroom setting.

Single control mixer tap
with swivelling body

AQ93117CR
Single control mixer tap with
swivelling body and two-jet
pull-out shower head

AQ93114CR
Single control mixer tap, swivelling
and tilting spout for under-window
installation

AQ93113CR
Single control mixer tap
with swivelling spout

AQ93300CR
Single control mixer tap with
swivelling spout and two-jet
directional shower head

AQ93300/50CR
Professional single control mixer tap
with swivelling spout and single jet
directional shower head

E93350CR
Electronic mixer tap with LED light,
two-jet directional shower head

AVP3535CR
Flush fit soap dispenser, capacity
300 ml.

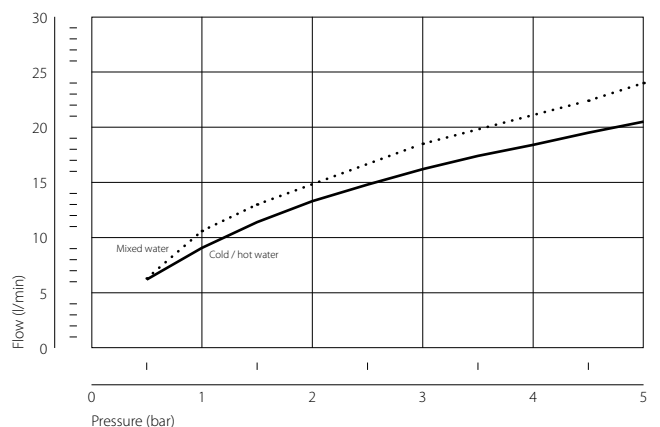

THE HEART OF THE ACQUERELLI MIXER

The Acquerelli collection has its own technological jewel, the only one of its kind in the world: the extraordinary Nobili Widd® 28 Water Immersion Dry Disc cartridge, designed and produced entirely in our own factories, the only cartridge capable of incorporating so many technological details in just 28 millimetres diameter. Technologies that guarantee unequalled reliability and very environmentally friendly use.

The Nobili Widd® 28 immersion cartridge allows reliability levels to be reached that were unimaginable up until now (torsional strength 18 Nxm, high pressure resistance to over 70 Bar). The water reaches the top of the mixer body flowing around the profile of the cartridge, thus drastically reducing mechanical wear: there are no internal limescale deposits and no grease is washed away. In this way, the lubrication of the plates remains unaltered and, furthermore, the low friction clutch system of the ceramic discs ensures an incredibly smooth movement of the lever. The dynamic flow regulator, temperature limiter and the use of food-grade materials guarantee total respect for the environment.

Nobili Widd® 28 flow graph compiled by the Nobili laboratory on 26/04/2011.
Test conditions: cold water at 15°C, hot water at 65°C.

THE TECHNOLOGY

The technological efficiency and pure style of the Acquerelli collection are the result of the extremely high-tech heart with which it is fitted: use of the Nobili Widd® 28 cartridge, the only one in the world capable of housing so many innovations in just 28 millimetres diameter, signifies being able to design elegant and minimalist forms and at the same time reach the highest possible levels of eco-sustainability.

Dynamic flow regulator

The Nobili WaterSaving technology halves the consumption of water by applying a brake to the opening action of the lever at the half flow position (-50%). Once this slight resistance has been overcome, the mixer is free to output all the flow available.

Temperature limiter

Nobili EcoFresh technology prevents risks of scalding and at the same time reduces the consumption of hot water: the maximum temperature of the water output from the mixer can be varied by rotating a ring nut on the cartridge.

A brilliant finish

The gleaming polished finish is guaranteed by chrome plating values higher than the market standard: 15.0 µm of Nickel and 0.5 µm of Chrome. All the processes are carried out at our own factories in full compliance with environmental standards.

Fluid movements

The low friction of the clutch type ceramic discs avoids friction between the plates when the mixer lever is turned to the closed position, thus reducing wear of the plates and guaranteeing the soft fluid movement of the lever.

Neoperl® Caché® aerator

A perfect flow of water in minimalist style: the Neoperl® Caché® concealed aerator fitted to the Acquerelli collection supplies the ideal mix of air and water, increasing the jet pressure while reducing the amount of water output.

Parigi® Parinox® Softpex® hoses

The first flexible pipe approved anywhere in the world, thanks to its superior internal hygiene properties, its optimum resistance to temperature and pressure and its improved flexibility compared to pipes in traditional PE-X.

Featherweight

The formal elegance of the Acquerelli 113 and 300 sink mixer taps has been obtained by mounting the new Nobili Widd® 28 cartridge perpendicular to the centreline of the body. Aesthetics, technology, functionality.

Magnetic attraction

The use of the Acquerelli 300 sink mixer tap with 2-jet directional shower head is made easier by the powerful neodymium magnet that attracts the shower head, making its removal and replacement that much easier.

Support flange

The flange type support supplied with all our kitchen mixer taps extends the bearing area over the sink top and greatly increases stability, reducing any oscillation in particularly thin mounting surfaces.
